

HU ZHENTAO

AI Product Manager - Agents, Multimodal Applications, and Applied AI

Email: hztztmbn@163.com | Phone: (+86) 187-1086-9322 | WeChat: Crazydogone | Homepage: <https://crazy6dogs.github.io/>

PROFILE

AI product builder turning LLM, agent, speech, digital human, and AIGC capabilities into deployable workflows across enterprise and consumer-facing scenarios.

Current work spans problem definition, PRD and solution design, prototype validation, model/API integration, budget/procurement materials, vendor coordination, and rollout. Positioning for OpenAI or Anthropic product roles where AI literacy, technical taste, user-centered judgment, and safety-aware deployment matter.

CORE SKILLS

- AI product: PRD and solution design, MVP validation, user scenario decomposition, acceptance metrics, competitive research, pilot rollout.
- Agents and multimodal: agent workflow design, function calling, prompt engineering, ASR/TTS/LLM chains, image/video generation pipelines.
- Execution and collaboration: Python, PyTorch, FastAPI/React/Vite integration experience, Coze workflows, project approval materials, budget and procurement support, vendor communication, deployment coordination.

EXPERIENCE

Early-Stage Startup (Emotional Companion AI Direction) - AI Product / Applied AI Projects

Jan 2026 - Present

- Deeply contributed to a multi-agent business advisory assistant built with function calling and prompt engineering, coordinating Q&A, recommendation, lead capture, and tool-calling flows for client demos and scenario adaptation.
- Initiated and drove a wellness companion digital human product, including product research, requirement definition, technical solution design, interaction architecture, milestone planning, and team coordination.
- Helped the digital human project secure about RMB 800K in staged budget support; derivative commercial demos and pilot opportunities are in progress.
- Advanced an AIGC comic/video pipeline covering content/IP acquisition, storyboard generation, image/video generation, multilingual translation, distribution, and monetization; partner-side pilot and procurement interest has been expressed.
- Co-created an AI training product and video generation workflows; the training base enrolled 40+ learners, completed an RMB 798-level course package, and supported e-commerce virtual try-on plus semi-automated digital human templates.

Huawei Consumer BG - Audio Algorithm Engineer Intern

Jul 2024 - Oct 2024

- Studied spectrograms, 3A algorithms, and audio preprocessing; built a research prototype, collected data based on ICASSP 2021 nn-ref related work, and participated in endpoint AEC testing on iPhone and Huawei devices.

SELECTED AI PRODUCT PROJECTS

Wellness Companion Digital Human Product

2026

- Compared hardware, deployment options, LiveTalking, and OpenChatAvatar across latency, privacy, cost, maintainability, and delivery risk.
- Validated OpenChatAvatar, Coze-agent, and real-time end-to-end voice routes; scoped modules for companion conversation, memoir generation, music playback, emergency fallback, family linkage, privacy authorization, and non-medical boundaries.

Multi-Agent Product Management System

Product Design

- Designed an MVP defining member agents, a project manager agent, a flowchart command surface, task review, agent memory, model-call tracing, and the path from mock demo chain to real API loop.

Voice Interaction Model Based on Llama3-8B

Oct 2024 - Dec 2024

- Built a pre-research interaction chain with whisper_large_v2, Llama3-8B, and tacotron2-DDC-GST; tested Qwen and DeepSeek model families on audio-data fine-tuning scenarios.

EDUCATION

- University of Chinese Academy of Sciences, M.S. in Electronic Information, Institute of Computing Technology, Sep 2022 - Jan 2026.
- Xidian University, B.S. in Electronic Information, Sep 2018 - Jun 2022.

PUBLICATIONS

- Time-domain multi-scale analysis based wireless human activity recognition method, first author.
- T-FrFT: Fractional Fourier Transform based Discriminative Feature Extraction Method for Human Activity Classification, IJCNN 2025, first author.
